

MAKINO INC.

At Makino Inc., we work to treat the environment in a responsible manner and in compliance with all applicable laws and regulations.

In addition, we operate our business with a view towards sustainability, both in the products we sell and service and in the way we conduct our operations.

We believe these practices will positively affect the communities in which our customers, business partners and employees live and work.

Products

Makino Inc. works to make our products more energy efficient through continuous design innovation. We work closely with our manufacturing colleagues to develop and implement operational and process improvements.

We take a life cycle cost approach to the use of our machines and are confident that our high quality machines offer best in class energy efficiency over the lifetime of the machine. We offer numerous energy saving and power management functions on our machining centers designed to reduce power and consumable resource consumption. Our machines are designed to effectively capture waste materials for proper recycling.

Operations

Makino Inc. applies our sustainability philosophy to our operations. We operate waste recycling programs for many materials and consider and utilize energy saving strategies whenever possible. Our goal is to meet our current business needs without compromising those of future generations.
