

Owning a Makino Is Easier than Ever

Makino Capital Services Is Extending Two Special Financing Programs

Makino Capital Services (MCS) is offering two financing programs designed to address one of the largest challenges you face in managing the financial burden of capital equipment investment. Through these programs, we have created an environment where you allow the machine to “pay its own way.”

By eliminating the need for a large down payment and by lowering the cost of the machine capital “carry cost”, you can install, operate, create revenue, and turn revenues into cash before the first amortizing machine payment needs to be made.

You can then allow the revenue/cash made from the operation of the new machine, to pay for itself! This enables you to scale your production needs to meet your orders without the need for large equity payments or having to carry the debt burden of the investment while you move through the cash cycle.
